Problem 1

a) The top 25 teams and their corresponding values in wt for t = 10,100,1000,10000 are

b)

Plot $\|\mathbf{w}_t - \mathbf{w}\|$ as a function of t for t = 1,...,10000.

Problem 2 a) Implement and run the NMF algorithm on this data using the divergence penalty. Plot the objective as a function of iteration.

b) After running the algorithm, normalize the columns of W so they sum to one. For each column of W, list the 10 words having the largest weight and show the weight. The ith row of W corresponds to the ith word in the "dictionary" provided with the data. Organize these lists in a 5 \times 5 table.
